Luxury refined

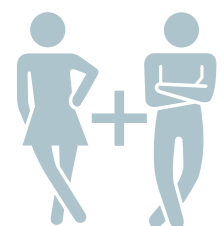

THE NEXT GENERATION

Contemporary fresh water loos

WC2 pod combines sophisticated style with the latest fresh water vacuum technology to deliver a level of refined luxury demanded by great events.

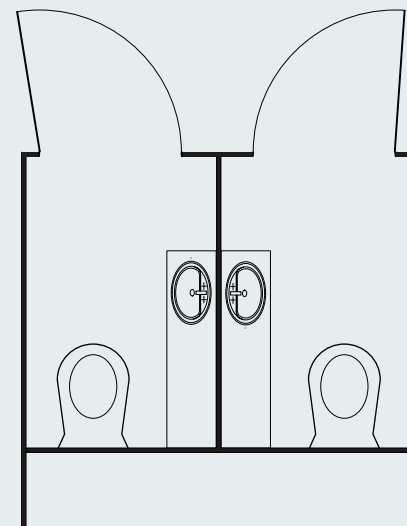

Each 1+1 pod is a floor mounted facility suitable for events with fewer than 100 attendees.

THE NEXT GENERATION

Fresh Technology

- JETS™ Vacuum operated, fresh water flush (0.5l per flush)
- Odour-free and Chemical-free

Vacuum flushing technology means that with each flush the air in the WC cubicle is replaced with fresh air from outside, eliminating any odour problems that could occur with more conventional systems. A vacuum-based flush also means splash-free flushing thereby helping to maintain clean facilities throughout your event.

WC2 can operate as a self-contained system using the integral tanks or it has the flexibility to be connected to mains facilities if required. Connecting a WC2 to mains services increases the capacity of the system and it can significantly reduce hire costs.

Style & Features

Each pod sits directly on the ground with no need for entrance steps. They can be used in a classical Ladies/Gents arrangement. The door signs can be shaped to offer unisex or single sex installations. The WC2 pod is a compact system with excellent accessibility and multiple pods can be combined at an event to provide the required capacity. The system is particularly suited for incorporating inside marquees and tipis to create enclosed cloakroom environments. A single pod can be used to supplement our other facilities for larger events and also at events where some guests may require step free access to the loos.

- Framed images of the Lake District by Martin Lawrence Photography
- Stainless steel interior trim
- Sensor taps with hot water
- Recessed LED ceiling lighting
- Corian vanity surfaces
- Large mirrors
- Entrance lighting
- Wall hung WCs
- Space heating
